Mr. Yuxiao Ye

184035@qq.com | +86 18519112663
PhD Student in Hong Kong University of Science and Technology
Research Interests: Multimodal Generation; LLM /Post-training.

EDUCATION

Hong Kong University of Science and Technology **2025.08-Present**
PhD in Electronic and Computer Engineering Supervisor: Prof. Ling Pan

Beijing Institute of Technology (985 project university) **2022.08-2025.06**
MSc in Computer Science and Technology Supervisor: Prof. Chi (Harold) Liu, *FIET, FBCS*

Beijing Institute of Technology **2018.08-2022.06**
BSc in Computer Science and Technology, Xuteli School (Honors College of BIT) Average Score: 88.6/100 (rank: top 10%)

HONORS and AWARD

Grand Prize in "China Collegiate Computing Contest - AI Innovation Contest" (中国高校计算机大赛——人工智能创意赛创新组特等奖，三千支参赛队伍评选唯一特等奖) **2022**
National Scholarship (国家奖学金) **2023 & 2024**
Outstanding Graduate of Beijing (北京市优秀毕业生) **2025**

RESEARCH EXPERIENCES

Intern, Kling AI **2026**

- Multi-turn in-context image editing requires models to follow new instructions while retaining session-level constraints, yet existing models suffer from context dilution and error propagation. We introduce Edit-R2, a reinforcement learning framework that reconstructs session intent through In-Context Chain-of-Thought and jointly optimizes reasoning and image generation with prefix-valid advantage refinement, improving instruction following and global awareness over BAGEL on MICE-Bench (Turn 2: +18.65 and +18.61 percentage points, respectively).

Intern, Stepfun **2025**

- Current RL-based post-training methods for LLMs uniformly penalize all tokens in negative samples, despite the recognized value of certain steps like reflection and verification. We introduce a novel RL framework that **performs fine-grained segmentation and augmentation of these valuable steps within negative samples**, enhancing the reasoning capabilities of LLMs **(AIME24 +2%, AIME25 +4%)**.
- We developed **an offline RL approach with negative sample augmentation to train tool-calling LLM agents**. This method stimulates the agent to more actively utilize tools (e.g., search) for critical information retrieval, achieving performance gains while maintaining high sample efficiency **(GAIA +7%, XBench +8%).**

Intern, SenseTime, Large Language Model Group **2023.12-2024.05**

- Constructed a new Text-to-SQL benchmark to mitigate overfitting in LLMs, conducted comprehensive evaluations on five Text-to-SQL sub-tasks across six LLMs, identified the distinct capabilities and limitations of LLMs, and proposed optimal in-context learning solutions tailored to each sub-task.
- Proposed an LLM-based Text-to-SQL framework, consisting of an enhancement of in-context learning and schema linking, and a cross-consistency mechanism across different models, which **achieves new SOTA results on the Spider benchmark with an accuracy of 87.6%.**

SKILLS

Programming: Python, C/C++/C#; SQL

Software: Pytorch, VeRL;

English Proficiency: IELTS 7.5
